Research-Grade Labeling Guideline

General Annotation Rules

1. Scope: Annotate the text of the utterance. Use the context of the two preceding turns (the immediate history) to resolve ambiguity, especially for Intent and Dialogue Act.
2. Exclusivity: For each dimension (Intent, DA, Emotion, Generation Gap Indicator (GGI)), select only one label per utterance.
3. Ambiguity: If an utterance could fit multiple categories, select the primary goal, function, or feeling.
4. Dialogue Act: Choose from predefined classes.
   Intent: Choose from 30 predefined intent classes.
   Emotion: Choose one predefined emotion label.

I. Intent (Goal-Oriented Action)

- Express Emotions or Attitudes: complain, praise, apologize, thank, criticize, care, agree, oppose, taunt, flaunt, joke, doubt, acknowledge, refuse, warn, emphasize
- Achieve Goals: inform, advise, arrange, introduce, comfort, leave, prevent, greet, ask for help, asking for opinions, confirm, explain, invite, plan

II. Dialogue Act (Functional Role)

12 total from MELD-DA/IEMOCAP-DA (simplified Switchboard):
greeting, question, answer, statement-opinion, statement-non-opinion, apology, command, agreement, disagreement, acknowledge, backchannel, others

III. Emotion (Affective State) Combined MELD (7) and IEMOCAP (6) Labels:
10 total: angry, happy, sad, neutral, frustrated, excited, surprise, fear, joy, disgust

IV. Generation Gap Indicator (GGI)

Label	Key Definition & Trigger	When NOT to Label (None)
Stereotyped Expectation	Speaker interacts with a "generational in a Negative way" (e.g., "all kids today," "old people always...") rather than the individual. Must result in defensive or misaligned communication.	General observations about age that are accepted or agreed upon without friction.
Ignored Input	The "Dismissive" Gap: One person feels ignored or restricted. Triggered by non-listening, ignoring contributions, or giving harsh, imperative orders that cause dissatisfaction.	Direct instructions that are followed cooperatively without verbal or emotional resistance.
Slang Mismatch	Using age-specific vocabulary that stalls the conversation. Trigger: A clarification request ("What?"), a long pause, or visible	Use of slang that is understood or used jokingly by both.

Label	Key Definition & Trigger	When NOT to Label (None)
	confusion/exclusion.	
Perceived Disrespect	Behaviors that violate social "norms of respect" (Face-Threats). Words that undermine the listener's status/dignity, leading to withdrawal or counter-attacks.	Playful teasing, banter, or "tough love" where both parties remain emotionally engaged.
Method Divergence	Active verbal resistance over the "correct" way to do a task (Traditional vs. Modern). Both agree on the goal but argue over the procedure.	One person teaching a method and the other person accepting it or trying it without complaint.
Digital Disparity	Friction specifically regarding tech skills. Trigger: Impatience from the "fluent" person or visible anxiety/frustration from the "hesitant" person.	Simply using a phone or talking about technology where both parties are comfortable.

V. Conversation Flow Marker: Interruption

Interruption To be labeled when one speaker's turn overlaps or breaks the flow of another's.

1. interruption_role:
    - Intervening Speaker: The actor who breaks into the current turn.
    - Interrupted Speaker: The person who was speaking and was stopped or overlapped.
    - None: No interruption occurred.
2. interruption_type (Only for the Intervening Speaker):
    - Disruptive Intervention: Breaking in to change the subject or take over the floor (Negative/Neutral).
    - Cooperative Assistance: Breaking in to help the speaker find a word or finish a thought (Positive).
    - Cooperative Agreement: Breaking in to show enthusiastic agreement (e.g., "Exactly!") without trying to take the floor (Positive).
    - None: Used for the *Interrupted Speaker* or when no interruption occurs.

Dimension	Field Name	Label Set
interruption role	**interruption_role**	interrupted speaker / intervening speaker/ None
interruption type	**interruption_type**	Disruptive intervention, cooperative assistance,

Dimension	Field Name	Label Set
		cooperative agreement, None

Simplified Lists

1. Intent Categories: complain, praise, apologize, thank, criticize, agree, taunt, flaunt, joke, oppose, comfort, care, inform, advise, arrange, introduce, leave, prevent, greet, ask for help, doubt, acknowledge, refuse, warn, emphasize, asking for opinions, confirm, explain, invite, plan

2. Dialogue Acts: greeting, question, answer, statement-opinion, statement-non-opinion, apology, command, agreement, disagreement, acknowledge, backchannel, others

3. Emotions (IEMOCAP + MELD): angry, happy, sad, neutral, frustrated, excited, surprise, fear, joy, disgust

4. ggi: slang mismatch, perceived disrespect, stereotyped expectation, ignored input, method divergence, digital disparity, none

5. interruption role: interrupted speaker, intervening speaker, none
   interruption type: disruptive intervention, cooperative assistance, cooperative agreement, none

Overall:

Dimension	Coarse-Grained Category	Total Number of Fixed Labels
I. Intent	Express Emotions/Attitudes & Achieve Goals	**30**
II. Dialogue Act (DA)	Linguistic Function	**12** (e.g., question, command, backchannel)
III. Emotion	Affective State	**10**(e.g., joy, frustrated, neutral)
IV. Generation Gap Indicator (GGI)	Source of Intergenerational Conflict	**7** (e.g., Slang Mismatch, Digital Disparity)
V. Conversation Flow: Interruption	**A. Structural Role** (Victim)	**3** (interrupted speaker / intervening speaker/ None)
	B. Functional Type (Actor)	**4** (disruptive intervention, cooperative assistance, cooperative agreement ,None)
